A mother brings her 4-month old baby because she thinks he looks a little blue and seems to be a bit short of breath when feeding him. He has no significant perinatal or other history, and neither does his mother or father. His ECG reveals a right ventricle hypertrophy and right axis deviation. The X-Ray shows an enlarged right heart and an increased pulmonary vascular markings and the radiologist reports that he sees what looks like a classic pattern of a newborn in a storm.

Which of the following is your presumptive diagnosis before obtaining an echocardiogram?

Select your answer:

- a. Tetralogy of Fallot
- b. Tricuspid Atresia
- c. Total Anomalous Pulmonary Venous Return
- d. Coarctation of the Aorta
- e. Patent Ductus Arteriosus
